

COURSE DESCRIPTIONS

IT DEPARTMENT FIRST CYCLE COURSE DESCRIPTIONS

First year

Compulsory courses

CEN 101. Computer Engineering Orientation

Hours (Theoretical-Practical): 4 (2-2)

ECTS: 4

A first introduction to the discipline of computer engineering. A brief survey of the computer science discipline, focusing on the computer's role in representing, storing, manipulating, organizing and communicating information. For students considering further computer science offerings, this course provides an accurate picture of what lies ahead, hopefully increasing interest in the discipline. Since, computers are used widely in all areas of modern life. For this reason it is important for all students to understand how computers work and how computers can be used as a problem-solving tool. The focus of this course is on computer applications. The course stresses the ways in which computers can help you solve problems efficiently and effectively. The course provides a broad introduction to hardware, software, and mathematical aspects of computers.

CEN 111. Introduction to Algorithms & Programming

Hours (Theoretical-Practical): 5 (3-2)

ECTS: 7

This course provides an introduction to programming of computational problems. It covers the common algorithms, algorithmic paradigms to solve these problems. The course emphasizes the relationship between algorithms and programming, and introduces basic performance measures and analysis techniques for these problems with programming practices.

ELT 101. Development of Reading and Writing Skills in English I

Hours (Theoretical-Practical): 4 (2-2)

ECTS: 6

Students will be able to develop and improve aspects of academic reading in the English language, develop new vocabulary which is relevant to academic studies and the ability to derive meaning from context, advance to a higher level of reading comprehension, apply skills learned from reading texts to writing essays, and preparing presentations, debates in English, to analyze and produce different types of essays (e.g. comparison and contrast, classification, process analysis, cause-and-effect analysis, and argumentative) that are unified, coherent and organized. In addition to the integration of reading with writing, research-based instruction will be adopted, so that students will develop basic research skills including library or Internet search.

MTH 101. Calculus I

Hours (Theoretical-Practical): 5 (3-2)

ECTS: 7

Expand understanding of mathematical topics that may have been previously studied. Introduce and explore topics that possibly have not been part of the student's mathematical experience. Develop an appreciation for the development of mathematical thought and the contributions that mathematics has made to our world.

PHY 101. General Physics I

Hours (Theoretical-Practical): 5 (3-2)

ECTS: 6

PHY 101 is an introductory physics course for undergraduate students. This course focuses on basic physics concepts and connections to everyday life. Course topics include Newtonian mechanics, fluids, heat, vibrations, electricity and magnetism, light and sound,

quantum phenomenon, nuclear radiation, relativity, and cosmology. Connections to everyday life and society include energy conservation, global warming, nuclear energy, the origin of the universe, pseudoscience, and the search for extraterrestrial life. While advanced mathematics is not required for this course, basic math with some trigonometry and simple algebra is utilized. Proportional reasoning, estimating, and graphing skills are emphasized throughout the course. Overall goals of this course include students' gaining an appreciation for the physical world, improved critical thinking and reasoning skills, and improved scientific literacy for a better-informed public that can make intelligent voting decisions.

CEN 112. C Programming

Hours (Theoretical-Practical): 5 (3-2)

ECTS: 6

Learn the C programming language and its fundamental programming concepts. Gain the knowledge to write simple C language applications and undertake future courses that assume some background in computer programming. Topics include variables, data types, functions, control structures, pointers, strings, arrays and dynamic allocation principles. You need access to any programming environment that allows you to write, edit, compile, link and debug a C program.

ELT 102. Development of Reading and Writing Skills in English II

Hours (Theoretical-Practical): 4 (2-2)

ECTS: 6

The course aims to enhance students' academic skills, by integrating critical thinking strategies such as inference, synthesizing and drawing logical conclusions. Students will be able to infer word meaning from context, evaluate and categorize information. One of the main points is to integrate reading with writing. In order to help students develop strategies in academic reading and writing, various types of essays (e.g. a cover letter, statement of purpose, writing a research proposal, writing an abstract) will be analyzed and composed, with special attention paid to intertextual cohesion and coherence. In addition to reading and writing, the course aims to integrate presentations and debates relevant to written texts implemented in the course design.

MTH 102. Calculus II

Hours (Theoretical-Practical): 5 (3-2)

ECTS: 7

Students should be prepared to use the mathematical apparatus of calculus in technical courses that follow in the curriculum. Course aims to provide both theoretical and practical knowledge for the students to use, combining mathematical rigour with engineering know-how.

PHY 102. General Physics II

Hours (Theoretical-Practical): 5 (3-2)

ECTS: 6

By the end of the course students should be able to understand phenomena, concepts, terminology, and problem-solving skills in the field of electromagnetism, thermodynamics, optics, atomic, and nuclear physics.

MTH 104. Probability and Statistics for Engineers

Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

Emphasis is on probability theory and its applications, with a smaller module at the end covering basic topics in statistics (parameter estimation, hypothesis testing and regression analysis). The probability part includes events and their probability, the Total Probability and Bayes' Theorems, discrete and continuous random variables and vectors, the Bernoulli trial sequence and Poisson process models, conditional distributions, functions of random variables and vectors, statistical moments, second-moment uncertainty propagation and second-moment conditional analysis, and various probability models such as the exponential, gamma, normal, lognormal, uniform, beta and extreme-type distributions. In addition, the graduate subject has a module on system reliability, which covers both second-

moment and full-distribution techniques. Throughout the subjects, emphasis is on application to engineering and everyday life problems.

Second year

Compulsory courses

CEN 214. Object Oriented Programming

Hours (Theoretical-Practical): 5 (3-2)

ECTS: 7

This course is intended to provide in-depth object-oriented problem solving. This class focuses on object-oriented design of applications. We will be using the C++ and C# programming language as a tool for implementation of specific solutions. Students will critically analyse and explore programming methodologies and apply their studies to the design and implementation of contemporary software applications. Using creativity to solve challenging problems, as well as finding the optimum solution, is expected of all students. Upon completion of the course, the student will be able to: Define and describe object, class, method, inheritance, polymorphism, and encapsulation, describe the use of object oriented analysis and design tools such as class diagrams, use cases, design and code non-trivial object oriented programs.

CEN 281. Electronic Circuits and Devices

Hours (Theoretical-Practical): 5 (3-2)

ECTS: 6

This course covers semiconductor devices and electronic circuits; electrical characteristics, principles of operation, circuit models of diodes, field-effect and bipolar transistors, and operational amplifiers; analysis and design of basic application circuits.

CEN 283. Digital Design

Hours (Theoretical-Practical): 5 (3-2)

ECTS: 6

The course is designed to introduce the basics of digital design, digital logic and automata theory to students together with a solid introduction to hardware design in HDL, namely Verilog.

MTH 201. Differential Equations

Hours (Theoretical-Practical): 3 (3-0)

ECTS: 5

This Course introduces basic topics and solution techniques of differential equations. To develop an appreciation for the development of mathematical thought and the contributions that mathematics has made to our world. This course is designed to expand understanding of advanced mathematical topics and their applications with real life problems and analyzing the results.

MTH 203. Discrete Mathematics

Hours (Theoretical-Practical): 3 (3-0)

ECTS: 5

This course covers elementary discrete mathematics for computer science and engineering. It emphasizes mathematical definitions and proofs as well as applicable methods. Topics include formal logic notation, proof methods; induction, well-ordering; sets, relations; elementary graph theory; integer congruences; asymptotic notation and growth of functions; permutations and combinations, counting principles; discrete probability. Further selected topics may also be covered, such as recursive definition and structural induction; state machines and invariants; recurrences; generating functions.

CEN 212. Programming Languages

Hours (Theoretical-Practical): 5 (3-2)

ECTS: 7

This course teaches the principles of functional, imperative, and logic programming languages. Topics covered include: meta-circular interpreters, semantics (operational and

denotational), type systems (polymorphism, inference, and abstract types), object oriented programming, modules, and multiprocessing. The course involves substantial programming assignments and problem sets as well as a significant amount of reading. The course uses the C# or JAVA and Python programming language for all of its assignments.

CEN 252. Computer Organization

Hours (Theoretical-Practical): 3 (3-0)

ECTS: 5

Organization of a simple stored-program computer: CPU, busses and memory. Instruction sets, machine code, and assembly language. Conventions for assembly language generated by compilers. Floating-point number representation. Hardware organization of simple processors. Address translation and virtual memory. Very introductory examples of input/output devices, interrupt handling and multi-tasking systems.

CEN 251. Data Structures

Hours (Theoretical-Practical): 3 (3-0)

ECTS: 5

This course is designed to give an introduction to the concepts of data structures and algorithms which are related to specific data structure. Main goal of the course is to give essential information that every serious programmer needs to know about algorithms and data structures. All algorithms and data structures which are covered in this course will be implemented using Java programming language during practical sessions.

MTH 204. Numerical Analysis

Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

This course analyzed the basic techniques for the efficient numerical solution of problems in science and engineering. This course intended to cover usage of matlab for mathematical equations such as linear, non-linear, Lagrange, Approximation, Polynomial, Optimization and boundary value problems.

Third year

Compulsory courses

CEN 301. Operating Systems

Hours (Theoretical-Practical): 3 (3-0)

ECTS: 5

This course studies fundamental design and implementation ideas in the engineering of operating systems. Lectures are based on a study of LINUX. Topics include virtual memory, threads, context switches, kernels, interrupts, system calls, interprocess communication, coordination, and the interaction between software and hardware. Individual laboratory assignments are also designed for practical sessions.

CEN 308. Software Engineering

Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

This course is aimed at helping students build up an understanding of how to develop a software system from scratch by guiding them thru the development process and giving them the fundamental principles of system development with object oriented technology using UML. The course will initiate students to the different software process models, project management, software requirements engineering process, systems analysis and design as a problem-solving activity, key elements of analysis and design, and the place of the analysis and design phases within the system development life cycle.

CEN 351. Database Management Systems

Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

This course investigates how database management system techniques are used to design, develop, implement and maintain modern database applications in organizations. Individual laboratory assignments are also designed for practical sessions.

CEN 311. Introduction to Web Engineering**Hours (Theoretical-Practical): 4 (2-2)****ECTS: 5**

Provides an introduction to the discipline of Web Engineering. This course aims to introduce the methods and techniques used in Web-based system development. In contrast to traditional Software Engineering efforts, Web Engineering methods and techniques must incorporate unique aspects of the problem domain such as: document oriented delivery, fine-grained lifecycles, user-centric development, client-server legacy system integration and diverse end user skill levels. This course draws upon previous programming and computing experience to develop practical web development and maintenance skills. This course is intended for students with knowledge of both Internet communication concepts and an introductory programming knowledge.

CEN 312. Web Programming**Hours (Theoretical-Practical): 4 (2-2)****ECTS: 5**

This is a beginners' course in programming together with HTML. It follows a problem-based approach which requires you to design and create a website of ever-increasing sophistication as the course progresses while creating design documentation, reflecting on the process, and (optionally) sharing and communicating with others on the course. The output of your work will be presented as a publicly accessible website, and you will submit a portfolio that maps what you have done to the course learning outcomes.

CEN 352. Introduction to MIS**Hours (Theoretical-Practical): 4 (2-2)****ECTS: 5**

This course examines the applications of computer-based information systems to the management of organizations. Topics include use of information to further the organization's mission and strategy, the role of users, the architecture of information and development of decision-support processes for managers. Technologies and tools such as HTML, database, and spreadsheet will be taught.

CEN 364. Introduction to Network Security**Hours (Theoretical-Practical): 4 (2-2)****ECTS: 5**

The objective of this course is to teach the fundamental concepts, architectures and protocols related to network security. Topics covered include: overview of network security; basics of cryptography; threat models; authentication and authorization mechanisms and standards; public key infrastructure; electronic mail security; network layer security; transport layer and web security; packet filtering, firewalls, intrusion detection, and virtual private networks; recent topics in network security.

CEN 384. Computer Architecture**Hours (Theoretical-Practical): 4 (2-2)****ECTS: 5**

This course is an undergraduate course on computer architecture with an emphasis on a quantitative approach to cost/performance design tradeoffs. The course covers the fundamentals of classical and modern processor design: performance and cost issues, instruction sets, pipelining, caches, physical memory, virtual memory, I/O superscalar and out-of-order instruction execution, speculative execution, long (SIMD) and short (multimedia) vector execution, multithreading, and an introduction to shared memory multiprocessors.

CEN 396. Digital Data Communications**Hours (Theoretical-Practical): 4 (2-2)****ECTS: 5**

This course is intended to cover listed topics. Principles underlying communication network design, including physical layer, MAC layer modeling and engineering, and data link layer. Internet structure, Internet protocol models and engineering. Physical layer description will

include modulation, data transmission, and multiplexing. MAC layer modeling will include CSMA/CD, token ring and token bus techniques.

CEN 353. Introduction to E-Business/E-Commerce

Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

Electronic processing and transmission of data including text, sound and video for e-business. Electronic trading of goods and services, on-line delivery of digital contents, electronic fund transfer, electronic bill of lading, direct consumer marketing and after-sales services. E-business security, shopping carts, methods of electronic payments and XML related technologies.

CEN 355. Special Topics in Database Management Systems

Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

Introduction to database design and use of database management systems for applications. Topics include database architecture, comparison to file-based systems, historical data models, conceptual model; integrity constraints and triggers; functional dependencies and normal forms; relational model, algebra, database processing and Structured Query Language (SQL), database access from Applications-Embedded SQL, JDBC, Cursors, Dynamic SQL, Stored Procedures. Emerging trends will be studied, such as NoSQL databases, Internet & Databases and On-Line Analytical Processing (OLAP). A team project that builds a database application for a real-world scenario is an important element of the course.

CEN 363. Introduction to Network Programming

Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

This course covers TCP/IP network programming using Berkeley sockets as the application program interface. After an introduction to the concepts of computer networks, TCP/IP protocols, and sockets, TCP/UDP sockets and their example client-server programs are presented. The second half of the course covers advanced topics including I/O multiplexing, threads, non-blocking I/O, client-server design alternatives, etc. Along the semester, three mini-program assignments will be given.

CEN 365. Introduction to Mobile and Wireless Networking

Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

This course is providing a comprehensive treatment of wireless data and telecommunication networks in wireless networking. Topics include Wireless Networking Trends, Key Wireless Physical Layer Concepts, Wireless Local Area Networks, Wireless Personal Area Networks, WiMAX (Physical layer, Media access control, Mobility and Networking), IEEE 802.22 Wireless Regional Area Networks, IEEE 802.21 Media Independent Handover, Wireless Cellular Networks: 1G and 2G, 2.5G, 3G, and 4G, Mobile IPv4, Mobile IPv6, TCP over Wireless Networks, Ad Hoc Networks - Issues and Routing, Wireless Sensor Networks, Wireless Mesh and Multi-Hop Relay Networks, Radio Frequency Identification (RFID).

CEN 300. Industrial Training I

Hours (Theoretical-Practical): 0 (0-0)

ECTS: 2

All students are required to undergo industrial training for a minimum period of 60 working days. Normally, the industrial training is carried out as two components which are after the fourth and sixth semester. Placement of students at various companies will be supervised and coordinated by the Industrial Training Committee set up by the Faculty. The students will be placed at various companies. The training at the various companies will expose the students to a real working environment including the companies' organization structures, business operations and administrative functions. The hands-on experience in the training will reinforce what has been taught at the University.

CEN 392. Senior Design Project

Hours (Theoretical-Practical): (-)

ECTS: 7

In this course students work individually under the supervision of assigned professors to tackle real design problems for industry. Students gain a variety of benefits from this open-ended problem-solving experience, which requires them to synthesize and apply the knowledge they have gained through their engineering courses, to work within time and budget constraints, and to present their progress and results through regular oral and written communications with company members.

Elective Courses

BUS 303. Production Management

Hours (Theoretical-Practical): 3 (2-1)

ECTS: 3

The course includes topics such as systems, models and modelling approaches, decision analysis, certainty, risk and uncertainty conditions, linear programming, sensitivity analysis and transportation and assignment problems.

BUS 114. Communication Skills

Hours (Theoretical-Practical): 3 (2-1)

ECTS: 3

Communication skills are an essential element every employee and manager must have as part of their standard tool set. In this course, through interactive lectures, self-assessments, role-playing activities and video simulations, students gain practical experience passed on a flexible, genuine and self-confident approach. They also gain the skills to collaborate on written reports and oral presentations honing their communications skills

BUS 361. Leadership

Hours (Theoretical-Practical): 3 (2-1)

ECTS: 3

Upon completion of this course the student will develop a working knowledge of leadership theory and practice. The student will also develop self-knowledge of his or her leadership philosophy and preferred leadership styles along with a skill for successful analysis of cases involving leadership.

ENG 101. Introduction to Engineering

Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

Introduction to engineering disciplines and their sub-fields, basic tools used in engineering practice, hands-on engineering projects. The course familiarizes students with field of engineering in general and the individual disciplines within engineering in particular. At the end of the course students are expected to be cognizant of the role of an engineer in society and are thus able to make an informed selection of a field within engineering as their major.

ENG 103. Technical Drawing I

Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

Students learn to draft illustrations of machine parts, exploded pictorial assemblies, parts catalogs, plant layouts and elevations. The use of color and shading are introduced. Pictorial drawings combine elements of both technical and artistic drawing to convey all the information necessary to be used as guides by people involved in manufacturing, maintenance or sales where a complex part or process would be difficult to visualize when only orthographic views are given.

ENG 112. Bioengineering

Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

Principles, practice, and the role of bioengineers in science, engineering, and commercialization of medical products are explained in the course. Professional ethics, career paths, introduction to graphical design tools and instrumentation are also pointed during course.

ENG 105. Engineering Technology I
Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

Engineering Technology course focuses primarily on the applied aspects of science and that portion of the technological spectrum closest to product improvement, industrial practices, and engineering operation functions.

ENG 104. Technical Drawing II
Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

This course involves experience in technical drawing as a tool of technical communication. Emphases are on development of basic drafting skills, visualization and solving graphical problems as upper level of ENG 103.

ENG 106. Statics and Strength of Materials
Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

This course covers external and internal forces in structures and/or machines, including conditions of equilibrium, systems of force, moments of inertia and friction. It also covers the stress and strain relationships in materials.

ENG 110. Introduction to Visual Arts
Hours (Theoretical-Practical): 4 (2-2)

ECTS: 5

This course provides an introduction to the language of the visual arts and a foundation for individual understanding and enjoyment of art. This class will focus on how art communicates, how to analyze and interpret it, and how we can see it as a cultural product that reveals something about the society that produced it. The first part of the course covers the basics of art theory and practice. The second part will focus on materials and techniques. And the third part will be a brief survey of the history of art from prehistory to the present. Class sessions will move between lecture and in-class discussions.

BUS 103. Introduction to Business
Hours (Theoretical-Practical): 3 (2-1)

ECTS: 3

This course presents a balanced view of business; the strengths, weaknesses, successes, failures, problems, and challenges. It provides students a base for more advanced courses. The objective of this course is to provide students a clear and complete description of the concepts underlying business and illustrate the dynamism and liveliness of business organizations and people who operate them with real life examples.

BUS 105. Introduction to Law
Hours (Theoretical-Practical): 3 (2-1)

ECTS: 3

This course gives a general overview of law and legal systems. It covers the nature and sources of law, court systems, and the substantive areas of constitutional law, contracts, torts, criminal law, contracts, agency, and property. This course is geared towards providing students with the basic knowledge of all aspects of the law, critical legal thinking, and a comparative approach to the civil and common law systems. This course is a prerequisite for all other Legal Studies courses.

BUS 112. Fundamentals of Management
Hours (Theoretical-Practical): 3 (2-1)

ECTS: 3

This course provides a thorough understanding of what is required to set up organization, motivate and manage your team successfully and provides clear structures and tools to enable you to do this. It will show you how to master the five key areas of modern management: Goal Setting; Effective Time Management; Performance Management; Motivating Your Team.

BUS 221. Marketing I
Hours (Theoretical-Practical): 3 (2-1)

ECTS: 3

The purpose of this course is to cover subjects that relate to foundations of marketing management in modern business establishments. Topics to be taught in this course include definition and scope of marketing, marketing environment, managing marketing information, consumer and business buyer behavior, creating value for target customers, product, services and branding strategy, new product development and product life-cycle strategies, pricing products: Understanding and capturing customer value.

BUS 222. Marketing II

Hours (Theoretical-Practical): 3 (2-1)

ECTS: 3

Marketing is a key function for all commercial and non-commercial organizations today. This course covers basic marketing subjects and gives students an opportunity to prepare a real life project through which they will have a chance to see how marketing is applied in real world. Basic topics to be covered in this course include pricing, supply chain management, retailing, wholesaling, advertising, personal selling and direct marketing.

ECO 102. Introduction to Economics

Hours (Theoretical-Practical): 3 (2-1)

ECTS: 5

Students will learn about essential principles of economics. They will learn how people, companies and governments should manage scarce resources in an effective way.

ECO 206. Macroeconomics

Hours (Theoretical-Practical): 3 (2-1)

ECTS: 5

This course provides an overview of macroeconomic issues: the determination of output, employment, unemployment, interest rates, and inflation. Monetary and fiscal policies are discussed. Important policy debates such as, the sub-prime crisis, social security, the public debt, and international economic issues are critically explored. The course introduces basic models of macroeconomics and illustrates principles with the experience of the U.S. and foreign economies.

BOS 101. Bosnian Language I

Hours (Theoretical-Practical): 2 (2-0)

ECTS: 0

This course provides Basic communication skills such as understanding and speaking in Bosnian language by understanding the structure of Bosnian language on starter level.

BOS 102. Bosnian Language II

Hours (Theoretical-Practical): 2 (2-0)

ECTS: 0

This course provides Basic communication skills such as understanding and speaking in Bosnian language by understanding the structure of Bosnian language on beginner level.

TDE 191. Turkish Language I

Hours (Theoretical-Practical): 2 (2-0)

ECTS: 0

This course provides Basic communication skills such as understanding and speaking in Turkish language by understanding the structure of Turkish language on starter level.

TDE 192. Turkish Language II

Hours (Theoretical-Practical): 2 (2-0)

ECTS: 0

This course provides Basic communication skills such as understanding and speaking in Turkish language by understanding the structure of Turkish language on beginner level.

BUS 108. Business English

Hours (Theoretical-Practical): 3 (3-0)

ECTS: 3

The course aims at developing fluency and accuracy in using Business English with the help of essential business content: basic structures and vocabulary, authentic reading and listening texts (e.g. newspaper articles, interviews, etc.), business reports and case studies.

It covers the most important areas of management, production, marketing, finance and macroeconomics.

ECO 104. EU integration and Bosnian Economy

Hours (Theoretical-Practical): 3 (3-0)

ECTS: 3

This course covers familiarization of students with the institutional and economic aspects of the European Union to improve their ability to frame and analyze economic policy questions in a coherent way.

ELT 123. Effective Communication Skills

Hours (Theoretical-Practical): 3 (3-0)

ECTS: 3

This course develops your ability to focus on your outcome, tune in to your audience and develop your message for clarity and impact. Your ability to create an environment for open discussion and ongoing dialogue is crucial for communication success. The communications skills covered in this course will increase your ability to exercise choice and control for every type of conversation, influence without authority and improve quality of relationships and productivity.
